Ton, Thaian Sequence Search Request

I would like to request a search for Application No. 09/696,686 [Inventor: Allen, Filing Date: 10/26/2000]

A standard sequence search for SEQ ID NOS: 45, 46, 47, 50 and 51 against the commercial nucleic acid databases.

Thank you very much.

Thaian N. Jon

Five-day old seedling roots were then harvested, total RNA was prepared, polyfox Navas purified, one primary unamplified cDNA library was made, purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript sK(-) cDNA phagemids. These steps were performed in the TJ SK(-) cDNA phagemids. These steps were performed in the TJ SK(-) cDNA phagemids. Fehron). Phagemids were plated and Riverside (Choi, Close, Fehron). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) picked at the Clemson University Genomics Institute (CUGI) performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, oates phreat value 20 or above. For more details on library preparation and sequence and contains a minimum of 100 bases of preparation and sequence and vorvariere harrians.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AG126129.1 GI:16655294

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. When the standard of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutovyo Osogawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-B and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's PI and EST libraries. A more detailed description of the library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GSS 04-JUN-1999
Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, Wir. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2, cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Direct Submission

/note="Organ: lung: Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Plasmid DNA from the normalized library NCI_CGAP_Lu5 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 1520904-152439). Subtraction by Bento Soares and M. Fatima Bonaldo.

Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of brosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Joseph 1 to 922)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3, Application US/08480382

Sequence 3, Application US/08480382

Patent No. 5986079

GENERAL INFORMATION:
APPLICANT: Barr, Pathip J.
APPLICANT: Reafman, Rnadal J.
APPLICANT: Reafmap-Olson, Patricia
APPLICANT: Wasley, Louise
APPLICANT: Wong, Polly A.
TITLE OF INVENTION: Expression of PACE in Host Cells and
TITLE OF INVENTION: Methods of Use Thereof
NUMBER OF SEQUENCES: 7

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 2; Length 4405;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           05-SEP-2000
                                                                                      02-AUG-2001
   The present sequence for T243 homologous sequence #2 is generated by PCR and is homologous to the T243 gene which encodes for a trinucleotide repeat protein (TRP). The invention describes methods of producing embryonic stem (ES) cells comprising a heterozygous disruption in a gene comprising a heterozygous disruption in a gene producing a knockout mouse comprising a homozygous disruption in a gene concoding TRP, where the disruption inhibits the production of the wild encoding TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. Also described are methods of determining whether expansion of the trinucleotide repeat in a gene concoding TRP produces a phenotypic change. The transgenic animals and the concoling TRP produces a phenotypic change. The transgenic animals and the concoling TRP produces a phenotypic change. The transgenic animals and the calls are useful for identifying compounds capable of ameliorating cells are useful for identifying compounds capable of ameliorating disease symptoms, and as test substrates for the identification of drugs, treating trinucleotide repeat disorders e.g. fragile X syndrome and treating trinucleotide repeat disorders e.g. fragile X syndrome and ciscaders are ideal model systems to study the progression of disease in ciscaders are ideal model systems to study the progression of disease in convivo, the molecular basis of these diseases and show the features observed in human disease. Using the mice, it is possible to model both
                                                                                                                                                                                                                                                                                                                                                                                                                                                      ó

                                                                                                                                                          The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                      3725 GCGCGCCGCTGGGCCGGGGCCAAGGCCTCGCAGGAGGAGGAGGAGGACCAAGGG 3666
                                                                                         Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition .

The present invention describes a library of human polynucleotides

comprising the sequences given in AA212532 to AA21779. Also described is

comprising the sequences given in AA212532 to AA217779. Also described is

can method of detecting differentially expressed genes correlated with the

can cancerous state of a mammalian cell, comprising detecting at least one

differentially expressed gene product in a test sample from a cell

can ferentially expressed gene product in a test sample from a cell

confirmed for a variety of purpose, e.g. detection of expression levels,

con be used for a variety of purpose, e.g. detection of expression levels,

can be used for raising artibodies for experimental, diagnostic and

can be used for raising artibodies for experimental, diagnostic and

charapeutic purposes. The polynucleotides may also be used to construct

carrays for diagnostics (which may be used to determine function of an

concerls (e.g. to identify abnormal or diseased tissue in a human, to

two cells (e.g. to identify abnormal or diseased tissue in a human, to

concerly prognosis and management of colorectal cancer, breast cancer,

diagnosis, prognosis and management of colorectal cancer, breast cancer,

and lung cancer. The polynucleotides can also be used to screen for

The present sequence is provided in a specification relating to an isolated stargazin-like polypeptide comprising a sequence of 327 or 275 scaled a city of modulating the steady state. The polypeptide is useful for treating a muino acids fully defined in the specification, or its variant capable of modulating the steady state. The polypeptide is useful for treating a subject having a neuronal disorder that is responsive to calcium channel modulation. It is useful in the manufacture of a medicament for treatment or prophylaxis of a disorder that is responsive to calcium channel modulation, e.g. epilepsy, episodic ataxia, spinocerbellar ataxia, hypertension, ischaemic heart disease, neuroprotection, stroke, pain, cerebral ischaemic hadrensclerosis, tardive dyskinesias, peripheral vascapasm, atherosclerosis, tardive dyskinesias, nigraine, hadache, bipolar disorders, unipolar depression, anxiety, parkinson's disease, cognitive disorders, ophthalmic diseases, neuromuscular disorders and tinnitus. Nucleic acids encoding these polypeptides are useful in the production of the polypeptides, and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .;

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags (or identifying expressed genes. (I) is useful in gene therapy techniques (I restore normal activity of (II) or to treat disease states involving (II). (II) and its binding antibodies against it, detecting or a food supplement. (II) and its binding partners are useful in medical mading of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. (The polypeptide and polymorleotide sequences have applications in caponsible for genetic disorders or other traits to assess biodiversity conditional and products dependent on DNA and conditional and products dependent on DNA and conditional and products dependent on DNA and diagnostics, formations for the produce other types of data and products dependent on DNA and continuous of the produce other types of the product of produce other types of the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics formatics formations for the products dependent on DNA and diagnostics formations for the products dependent on DNA and diagnostics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diagnostic coding sequences of the invention.
Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

AA232000 and AA232001 encode, and AAY49501 and AAY49502 represent, human metalloprotease thrombospondin (METH) proteins METH1 and METH2

respectively. METH1 and METH2 have been found to be potent inhibitors of angiogenesis both in vitro and in vivo. They can be used for treating cancer and other disorders related to angiogenesis including abnormal wound healing, inflammation, rheumatoid arthritis, psoriasis, endometrial bleeding disorders, diabetic retinopathy, some forms of macula degeneration, hemanajomas, and arterial venous malformations. They may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilisation (chemotaxis) of immune cells. The etiology of these immune deficiencies or disorders may be genetic, somatic, such as cancer or some autoinmune disorders, acquired (e.g. by chemotherapy or toxins), or infectious. They can also be used to treat inflammatory cused for detection and diagnosis. AA232002 to AAX32080, and AAX49503 to harvein.

The specification describes antisense oligonucleotides (AAX52869-X55271)

directed against at least 2 mRNAs selected from target genes, coding and
non-coding regions of RNAs corresponding to target genes, gene
initiation codons, genomic flanking regions, intron-exon borders, the
confine and all segments of RNAs encoding proteins associated with one
confine and all segments of RNAs encoding proteins associated with one
confine and all segments of RNAs encoding proteins associated with one
confine and all segments of mixtures. The antisense oligonucleotides
confidenced from sequences AAX55180-271) can be used for the
antisense treatment of diseases and conditions. Typical diseases and
conditions are those associated with impaired respiration and
conditions are those associated with impaired respiration and
inflammation, including lung diseases, pulmonary vasoconstriction,
conditions, respiratory distress syndrome, pain, cystic fibrosis,
crespiration, respiratory distress syndrome, pain, cystic fibrosis,
crespiration, respiratory distress syndrome, pain, cystic fibrosis,
conditions are concernomes of conditions, indicated cancer, lung cancer,
conditions are cancer, hepatocellular carcinoma, kidney cancer, melanoma,
conditions are distress, as well as all types of cancers which may metastasize
conditions the distress and conditions and prostate cancer.

AAX02956-X03048 and AAX22301-X22304 are overlapping BAC genomic sequences containing alternatively spliced forms of human IL-Ira. Such fragments are used in the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleic acid and protein. Tango-77 is a member of the cytokine superfamily that is expected to Thibit inflammation by binding to the interleukin-1 receptor (IL-IR). It processes associated with acute or chronic inflammation, e.g. asthma, chronic myelogenous leukaemia, rheumatoid arthritis, psoriasis and inflammatory bowel disease. It may also induce or suppress interleukins, cytokines and growth factors. Modulators of this protein are used to treat or prevent conditions associated with abnormal levels of inflammation, or activity of IL-1 or its receptor complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô

(HUMA-) HUMAN GENOME SCI INC

Ruben SM Rosen CA, Barash SC,

WPI; 2001-465570/50

plated nucleic acid molecule encoding a reproductive system antigen used in preventing, treating or ameliorating a medical condition Isolated 1.5

Disclosure; SEQ ID NO 9859; 1297pp + Sequence Listing; English.

The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.

The production of other cytokines are useful in gene therapy, vaccines or epstide therapy. The polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, heamalopolesis regulating activity, issue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemla, nervous system disorders, arthritis and

AAA00010 to AAA02716 represent polynucleotides isolated from cDNA libraries constructed from human colon cancer cell lines. The present livention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived. The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of a mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used in diagnosis and prognosis of diseases and disorders (e.g. identification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polynucleotide library used to determine cancerous states of mammalian

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a primer used in the analysis of a fragment of
the bovine viral diarrhea virus (BVDV) genome. The primer is used to
illustrate the nucleic acid analysis methods of the invention. The
methods are used for sequencing a nucleic acid in a mixture comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid analysis methods for simultaneously analysing multiple nucleic acid regions for diagnosis and differentiation of pathological organisms comprises sequencing the nucleic acids in the reaction mixture -
pre-metastatic or metastatic cancerous states, stages of cancer, or responsiveness of cancer to therapy). This is particularly for breast cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-negative breast cancer, lung cancer, and colon cancer.
                                                                                                                                                                                                                                                                                                                           009

ö
two nucleic acid target sequences. The methods are used for simultaneously analysing multiple nucleic acid regions in a single reaction. This can allow the reliable diagnosis and differentiation of pathological organisms. The methods can be adapted to use a series of pathological organisms. The methods can be adapted to use a series of primers with additional sequences which allows the size of the amplified region to be increased. The technique is especially useful when the usual sequence of the region to be detected is known and the assay is being service out to confirm its presence e.g. to rule out a falsely positive amplification reaction or to distinguish subsets of an organism of interest or allelic forms of a gene associated with a disease or predisposition to a disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a primer used in the analysis of a fragment of the bovine viral diarrhea virus (BVDV) genome. The primer is used to illustrate the nucleic acid analysis methods of the invention. The methods are used for sequencing a nucleic acid in a mixture comprising two nucleic acid target sequences. The methods are used for

simultaneously analysing multiple nucleic acid regions in a single reaction. This can allow the reliable diagnosis and differentiation of pathological organisms. The methods can be adapted to use a series of primers with additional sequences which allows the size of the amplified region to be increased. The technique is especially useful when the usual carried out to confirm its presence e.g. to rule out a falsely positive amplification reaction or to distinguish subsets of an organism of interest or allelic forms of a gene associated with a disease or predisposition to a disease.
                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or

    quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (IT) and its blunding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polyuculeotide sequences have applications in responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences ASS6197-AAS94564 represent novel human Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from Wipo at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Center: Whitehead Institute/ MIT Center for Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       * NOTE: This record contains 65 individual

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence asmpling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Center: Whiteheau

                                                                                                                     * NOTE: This record contains 155 individual
    * sequencing reads that have not been assembled into
    * contigor. Runs of N are used to separate the reads
    * and the order in which they appear is completely
    * arbitrary. Low-pass sequence sampling is useful for
    * identifying clones that may be gene-rich and allows
    * overlap relationships among clones to be deduced.
    * However, it should not be assumed that this clone
    * will be sequenced to completion. In the event that
    * the record is updated, the accession number will
